THE SELF-DISRUPTIVE LEADER
MARKET REPORT: BRAZIL

The Self-Disruptive Leader is part of Korn Ferry’s three-year examination of the transforming and disrupted Future of Work
Leadership will make or break businesses.
Leadership will make or break businesses. As much as it may seem logical to think so, it doesn’t always follow that great companies have great leaders. High performance often hides a multitude of sins—toxic cultures, questionable practices, employee disengagement, and more.

This stark reality was revealed in Korn Ferry’s latest report examining the skills future leaders need. Not only were investors of companies dissatisfied with what they saw, but they considered current leadership styles to be in urgent need of change: 70% argued short-term pressures stripped leaders of the ability to push through innovation, digitization, and change, while a surprising two-thirds (67%) identified current leadership norms as “not fit for the future.”

With the only certainty seemingly being that business will only face greater uncertainty, Korn Ferry’s findings suggest a new, very different leader is required.

Our research found that if companies are to avoid self-destructing, leaders need to embrace, rather than simply react to, the external disruptions they face. To beat disruption, they literally need to “disrupt” themselves—their thoughts, their values, their actions. Disruption of markets can only be met with the disruption of the leadership approach.

In short, it’s the Self-Disruptive Leader companies now need.

Companies with leaders who aren’t future-ready face a double bind: not only are they less able to adapt to the changing business environment, they may face a penalty from those who evaluate their businesses. To navigate this difficult situation, many companies need to overhaul their leadership development programs, as well as the very structure and culture of their businesses. This organizational step change will enable them to equip their leaders-in-waiting with the opportunities they need to become a new generation of Self-Disruptive Leaders.

In this supplementary report, we uncover what self-disruptive leadership could mean for Brazil.
Investors call for a new model of leadership.

The combined impact of disruptive global megatrends has forced organizations to evolve rapidly—sometimes frantically—thereby making leadership crucial to their continued success. Competent leaders are even more vital in a complex and continually evolving ecosystem. Companies that fail to satisfy the market that they have the right people at the top risk dwindling investment.

And yet our research shows that only 15% of today’s leaders can be considered self-disruptors. There is an urgent need to develop a pipeline of future ready leaders today. Investors and analysts in Brazil rate talent as very important across enterprises, but especially at the top: 86% cite an exceptional CEO as critical to an organization’s success. Meanwhile, 82% of investors say the need for transformation is going to make leadership more important to company performance within the next three years.

But the demand for this strong, innovative drive isn’t confined to one individual at the top: investors want leadership strength across the C-suite and beyond. In Brazil, 74% of respondents cited boards of directors as crucial to corporate performance, with 52% demanding top skills and capacities in the senior leadership team.

No more business as usual.

Investors in Brazil see the squeeze on the companies they rate and invest in: 88% believe these companies are confronting disruptive challenges, and 80% believe companies need to deliver some transformational change.

Technology is compounding organizations’ stresses, as it allows changes in one industry to swamp others—new competitors now emerge from anywhere. Tech companies now constitute the six largest companies in the world, and the expansion of this sector’s horizons seems boundless. Constant tech-related shake-ups make strategy planning a real challenge: 62% of Brazilian investors say it is harder to forecast threats when competition can come from anywhere. This has led 76% of investors to value future vision and orientation over past performance. In fact, globally, a company’s financial performance and earnings growth is now the least compelling factor for those making investment decisions.

Instead, Brazilian investors want organizations to launch into a major reconsideration and transformation of their practices on talent and leadership.

But exactly how do organizations get from here to tomorrow, and how do they identify, attract, develop, retain, promote, and expand the number of leaders they must have to succeed in the future of work?
Brazilian investors who believe that traditional and legacy leadership will not be fit for the future.

Brazilian investors who said the pressure for short-term performance works against leaders’ ability to deliver innovation, digitization, and change.

Brazilian investors who said they would give leaders more time to effect major change.

Brazilian investors who said they’d give leaders increased financial scope to make the changes necessary to bring their businesses in line with the future.
Models of good leadership are often based on replicating the characteristics and capabilities that have succeeded in the past. But while many of these qualities are important, this approach neglects the importance of the future. In a world characterized by rapid change, yesterday’s paradigms risk becoming redundant, or even harmful. Predicting exactly what the future will require is an impossible task, so leaders instead must equip themselves with a strong portfolio of future-oriented and change-ready skills in order to keep responding to fluctuating market demands with dynamism and insight.

We call these adaptive change-makers “Self-Disruptive Leaders.” Today’s business environment is characterized by rapidly changing strategies, business model innovation, and operational transformation. While leaders trapped in yesterday’s mindset often struggle to find their place and voice in this new business world, Self-Disruptive Leaders are highly learning agile, self-aware, emotionally and socially intelligent, purpose-driven, and assured but humble. They proactively modify their own methods and attitudes, enabling them to keep pace with the rapidly transforming environments that threaten slower-moving peers. Flexible mindsets at the top permeate throughout these businesses and enable every individual to navigate change and succeed in a shifting landscape. Leaders who make their teams dependent block growth; rather, those who can get organizations behind their vision and then empower others to execute on it are well-positioned to achieve.
The qualities that differentiate the Self-Disruptive Leader can be summarized by the ADAPT dimensions:

**Anticipate:** Demonstrate contextual intelligence to make quick judgments and create opportunities; focus on the societal needs that the organization wants to serve; provide a direction to unify collective efforts even among disoriented environments.

**Drive:** Energize people by fostering a sense of purpose; manage the mental and physical energy of themselves and others; nurture a positive environment to keep people hopeful, optimistic, and intrinsically motivated.

**Accelerate:** Manage the flow of knowledge to produce constant innovation and desired business outcomes; use agile processes, quick prototyping, and iterative approaches to rapidly implement and commercialize ideas.

**Partner:** Connect and form partnerships across increasingly permeable functional and organizational boundaries; enable the exchange of ideas; combine complementary capabilities to enable high performance.

**Trust:** Form a new relationship between the organization and the individual that centers on mutual growth; integrate diverse perspectives and values; help individuals to uncover their sense of purpose and facilitate them in providing their maximum contribution.
How we uncovered the Self-Disruptive Leader.

By analyzing the leadership profiles of 150,000 leaders from the Korn Ferry Institute’s proprietary data, the study uncovered the five ADAPT qualities of effective, future-focused leadership—qualities which correlate with a country’s ability to innovate, according to the Global Innovation Index, as well as with a company’s likelihood of being an acclaimed brand. Additionally, the study uses opinion research from 795 investors and analysts to model the gap (in 18 key global markets) between the current supply of these high-performance qualities and the market’s demand for them, to reveal just how wide leadership skills shortages are globally and by market. What does self-disruptive leadership mean for Brazil?

From a business perspective, Brazil’s environment is not different from the rest of the world. The country shares the same challenges around globalization, innovation, and digitalization that, while transforming the way companies operate, blur the competitive landscape. The need for self-disruptive leadership may be the unique key to face not only global challenges, but local ones, as well.

Paulo Pássaro, Senior Client Partner, Korn Ferry
In Brazil, investors on average believe that only 24% of all leaders in the country are equipped to lead future businesses. Moreover, in the aggregate, 82% of the investors believe fewer than 30% of the leaders are fit for the challenge.

**What Brazil has, what Brazil wants.**

Although there is global demand for all aspects of self-disruptive behavior in leaders, each market has different strengths and weaknesses in its current stock. What’s more, investors in different markets have distinctive priorities when it comes to what they want most from leaders. As a result, the greatest skill shortfall varies in different places, and leaders in each economy need to focus on a different ADAPT dimension to satisfy market demand.

**Accelerate** is at the top of the investors’ list, and current leaders also have this as one of their top skills. Current leaders also do relatively well on building **Trust**, yet Brazilian investors didn’t give trust a high priority. The area where Brazilian leaders fall behind investors’ expectations is **Drive**. In the ambiguous environment, leaders need to pay attention to how they can build resilience in their organizations to deal with frequent change.

**The gap between leaders’ abilities and market expectations.**

What Brazilian investors want

What Brazilian leaders have
The importance of focusing on trait-based development for breeding the next generation of Self-Disruptive Leaders.

Drive and Accelerate are the country’s must-have dimensions, but Brazilian leaders could leverage the Trust levels they present to develop the ability to drive organizations forward with vision and purpose, accelerating changing realities to create new opportunities.
Where will Self-Disruptive Leaders come from in the future?

These highly adaptative, purpose-driven leaders are highly learning agile, characteristics that may be already available at lower-level roles in their companies. To make the most of this talent pool, any individuals with potential must be allowed to test their aptitude at a higher leadership role. To become leaders, they’ll need exposure and guidance in dealing with executive job functions such as enterprise value, profit and loss, balance sheets, and external stakeholders. They must circulate throughout an organization to stimulate their minds, learn new skills, experience different ways of working, and build important relationships with colleagues of many different backgrounds, experiences, and capacities.

Investors view on where Self-Disruptive Leaders will come from:

- The tech sector (and other digital-native companies) will provide leaders for other verticals: 63% (Global total), 66% (Brazil total)
- High fliers with the right skill-sets in middle management: 63% (Global total), 46% (Brazil total)
- Existing leadership programs within corporations that are future oriented: 62% (Global total), 52% (Brazil total)
- Unconventional positions on boards, i.e. chief digital officers: 59% (Global total), 56% (Brazil total)
- We expect leadership roles will skip Generation X (born 1961-1981) and move to the digitally savvy millennial generation (born 1982-1995): 59% (Global total), 50% (Brazil total)
- We expect leadership roles will move quickly into the hands of Generation X—their time is now: 56% (Global total), 62% (Brazil total)

In Brazil, an overwhelming number of investors—66% to be exact—expect the tech industry and other digital-native companies to supply Self-Disruptive Leaders in the future.
Self-Disruptive Leaders won’t be found using well-worn practices. Instead, organizations will need to think about talent as a system if they want to tackle this complex and multilateral issue. Recruitment, compensation, training, development, and succession planning may need a full revamp to ensure that organizations widen and maintain a flow of diverse talent, especially of hard-to-find Self-Disruptive Leaders. In beginning to develop this system, businesses should focus on three key points:

- **Develop new mindsets.** Traditional leadership development focuses on skills and behaviors, but this needs to be supplemented with mindset development to successfully advance new Self-Disruptive Leaders.

- **Open up leadership development opportunities.** Leadership development must become available to more people. In the past, it often has been elitist and focused on certain individuals; it needs to move toward a collective model that empowers everyone in a company to develop their leadership capabilities.

- **Foster always-on development.** Organizations need to facilitate always-on development not only by providing learning opportunities, but by helping busy employees navigate training easily and rewarding them for learning. Simultaneously, individuals at all levels need to take ownership of their own development. Together, this will build an employment contract built on mutual growth.

Although these changes may seem daunting to current executives and directors, companies must act with urgency to put these structures in place. This evolution matters: the market already knows that companies need to do more to help tomorrow’s Self-Disruptive Leaders climb up through the business, with 63% of investors and analysts globally saying high fliers with the right skills and capacities in middle management will be vital in the future of work.
Traditional training routes aren’t equipped to solve the leadership crisis, often producing outmoded mindsets that can’t keep up with the rate of change. Instead, a revolution in how companies develop leaders is vital for closing the leadership pipeline gap.

To capitalize on an increasingly disruptive world, companies must accelerate their identification, recruitment, retention, development, and promotion of leaders with self-disruptive potential at all levels of the business. Organizations must develop a culture that empowers everyone within them to challenge their own thinking and disrupt themselves.

This final point underpins the solution to the leadership crisis: leadership can no longer be isolated and inscrutable. By cascading ADAPT proficiencies throughout the organization, companies will develop a self-perpetuating ecosystem of leaders, ready for whatever the future of work brings.
